T分數定義:

$T=10Z+50 \cdot Z=(X-X^{-})/\sigma$

X為學生原始分數, X^- 為平均分數, σ 為標準差。

若T=50,代表原始分數剛好是平均分數。

若T=60,代表原始分數比平均分數高了I個標準差。

若T=70,代表原始分數比平均分數高了2個標準差。

若T=40,代表原始分數比平均分數低了1個標準差,以此類推。

Remarks: 1.TR=Transferred W=Withdrawn @=Failed *=Lack of Scores #=Lectured in English \$=Distance Learning Courses. 2.Grades and credits in summer are not calculated into Semester GPA and Earned Credits, but in Graduation/Cumulative GPA and Credits. 3. Teacher Education, General Education, Language (except for course no. containing LANG5 or above), Military Training and Physical Education are not calculated into Semester and Graduation GPA and Credits. 4.^=Courses repeatedly taken are not calculated into Semester and Graduation GPA and Credits. 5 No rankings for Graduate Students. 6 Grades before Academic Year 2018 were not provided the corresponding Relative Grades. Grades before Academic Year 2021 were not provided the corresponding T Scores. 7.Students enrolled before or in Academic Year 2020 can choose "Letter Grades", "Letter Grades + Relative Grades" or "Letter Grades + T Scores" on their transcripts. Students enrolled after or in Academic Year 2021 can choose "Letter Grades + T Scores" or "Letter Grades + T Scores + Relative Grades" on their transcripts. 8 The larger the GPA, Percentage Average or T Scores is, the better a student performs. By contrast, the smaller the Relative Grade Average is, the better a student performs. 9 For graduate students the academic passing grade is B- and the passing grade of conduct is C-.

T Scores Definition:

$T=10Z+50 \cdot Z=(X-X^{-})/\sigma$

Where X=original score; X =average score; σ=standard deviation.

If T=50, it means that the original score is the same as the average score.

If T=60, it means that the original score is 1 standard deviation higher than the average score.

If T=70, it means that the original score is 2 standard deviations higher than the average score.

If T=40, it means that the original score is 1 standard deviation lower than the average score, and so on.
